

Preservative and Equipment Compatibility

For optimal performance and to ensure the long term durability of your baling equipment it is strongly recommended to only use Baler's Choice in conjunction with Harvest Tec applicators.

Using inferior hay preservatives with Harvest Tec equipment could lead to complications such as corrosion and unit break-downs. Opting for alternative products could potentially jeopardise your warranty coverage, leaving you responsible for any resulting issues

Why we only recommend Baler's Choice

Near neutral pH (6.0): Ensures a balanced environment for healthier hay and reduces risks of machine corrosion

Equipment friendly formulation does not damage applicator or baling equipment

Peace of mind. Rest assured, using Baler's Choice will not void your Harvest Tec warranty.

Risks associated with using inferior products

Increased risk of metal corrosion, damage to paintwork and equipment breakdown

Inferior finished product and increased losses through mould growth, mycotoxin formation, heating and discolouration.

If it is determined that a non-Harvest Tec manufactured product has been used inside the Harvest Tec applicator system where any failure occurs, Harvest Tec reserves the right to deny the warranty request at their discretion
